Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

ARMY MENTAL TESTS

By CLARENCE S. YOAKUM and ROBERT M. YERKES

Illustrated $1.50

Authorized by the War Department, this book provides for psychologists the record of an unparalleled experiment, and for business men an account of an achievement in scientific management whereby the United States, employing suddenly four million soldiers, found the right men for the right places.

The book describes the genesis, nature, and object of the tests, and their successful employment in the army. It also provides suggestions as to their value and use in business, together with full instructions for giving the tests and complete sets of blanks, some reproduced full size.

The authors are the distinguished psychologists, late of Texas and Harvard Universities, who, with a host of trained collaborators, prepared and conducted the tests in the great camps, throughout the country. Their royalties from the sale of this book revert to the funds of the National Research Council.

NOW READY

Vertebrate Zoology

By H. H. NEWMAN, Ph.D., Professor of Zoology and Embryology in the University of Chicago. Octavo, Illustrated. xiii+432 pages. $3.00.

A text-book for college courses in vertebrate zoology and comparative anatomy in which the traditional material is presented clearly and thoroughly. The author has added to the interest as well as the scope of the book by making use of the most recent advances in biology. The subject is approached from the dynamic rather than the structural point of view, emphasis being placed upon the physiological, phylogenetic, and ecological aspects. The origin and evolution of vertebrates is considered; and the evolutionary stages in the development of vertebrates from *Cyclostomata* through *Mammalia* are made the basis of arrangement. Careful attention is also given to anatomical facts and data.
Among the new conceptions which Professor Newman has stressed are *the axial gradient, racial senescence,* and *adaptive radiation.* The book is particularly well illustrated.

The Essentials of Psychology

REVISED EDITION

By W. B. PILLSBURY, Professor of Psychology in the University of Michigan. Cloth. 12mo. xiii+428 pages. $1.90.

This new edition is a careful revision of Professor Pillsbury's extensively used introductory text-book in Psychology. The book has been entirely reset and numerous changes have been made throughout, in order to clarify and improve the presentation, and also to bring into the new edition the results of the most recent advances in the science. The chapter on Emotion has been largely rewritten, the chapter on Memory has been expanded, and there is a new chapter on Types of Mind, dealing with some of the more general results of mental testing. At various points in the book, reference is made to the theories and research of Freud, Pawlaw, Watson and other important psychologists whose influence has been most marked in recent years. The questions and exercises at the end of chapters have been revised and improved.

As in the earlier edition, the author has drawn upon the conclusions of both the functional and structural psychologists and has combined the advantages of the rival schools. The general plan of the book is unchanged, as in its original form it proved so successful a text-book for first courses in psychology. The new edition should prove even more useful for this purpose.

THE MACMILLAN COMPANY

PUBLISHERS **NEW YORK**

The Journal of General Physiology

EDITED BY

JACQUES LOEB, New York, N. Y.

W. J. V. OSTERHOUT, Cambridge, Mass.

The Journal of General Physiology is devoted to the explanation of life phenomena on the basis of the physical and chemical constitution of living matter.

The Journal of General Physiology is issued bimonthly, one volume of about 600 pages appearing in a year. Contributions should be addressed to the editors of **The Journal of General Physiology,** The Rockefeller Institute for Medical Research, Avenue A and 66th Street, New York, or 60 Buckingham Street, Cambridge, Massachusetts. The papers should preferably not exceed twenty printed pages, not counting the space occupied by illustrations. Authors receive one hundred reprints of their papers free of charge; additional copies may be obtained at cost.

CONTENTS OF VOLUME II, No. 5, MAY 20, 1920

KRAFKA, JOSEPH, JR. The effect of temperature upon facet number in the bar-eyed mutant of *Drosophila*. Part II.

KRAFKA, JOSEPH, JR. The effect of temperature upon facet number in the bar-eyed mutant of *Drosophila*. Part III.

NORTHROP, JOHN H. The influence of hydrogen ion concentration on the inactivation of pepsin solutions.

NORTHROP, JOHN H. The effect of concentration of enzyme on the rate of digestion of proteins by pepsin.

HECHT, SELIG. The dark adaptation of the human eye.

BAILEY, I. W. The significance of the cambium in the study of certain physiological problems. Plate 1.

RABER, ORAN L. A quantitative study of the effect of anions on the permeability of plant cells.

RABER, ORAN L. The antagonistic action of anions.

REED, H. S. The nature of the growth rate.

LOEB, JACQUES. On the cause of the influence of ions on the rate of diffusion of water through collodion membranes. II.

LOEB, JACQUES. The reversal of the sign of the charge of membranes by hydrogen ions.

Subscription price per year (one volume), $5.00
